

ASCA + SAMBA 2026 | Booth 202

# Where ASC Workers' Compensation claims leak before denial - and how UHS helps stop it

Meet UHS at ASCA + SAMBA 2026 to see how ambulatory surgery centers reduce front-end leakage, strengthen proof of claim delivery, and recover value hidden inside underpayments and older WC A/R.

## Meet the UHS team at Booth 202

**DATES**

May 13-16, 2026

**LOCATION**

Gaylord National,  
National Harbor, MD

**BOOTH**

202

**AUDIENCE**

ASC + outpatient  
anesthesia leaders

## Schedule Time With UHS

1.88%

Denial rate when UHS patient access support was performed

15.15%

Denial rate when front-end verification was not performed

< 5%

Claims sent by print mail with UHS connectivity

~ 98%

Digital delivery using multi-route payer connectivity

## Most Workers' Compensation Issues Start Upstream.

In ASC Workers' Compensation, breakdowns at intake and routing create downstream rework, delays, and lost reimbursement.

UPSTREAM

### No Claim on File

Rebilling addresses symptoms—not root cause. Failures typically originate in payer setup, bill-to configuration, or intake accuracy.

SUBMISSION

### Proof of Submission

Paper workflows reduce visibility and weaken recovery. Digital submission creates verifiable audit trails.

INTAKE

### Front-End Accuracy

Jurisdiction, payer, and authorization errors prevent claims from entering the correct workflow.

TIMING

### Downstream Impact

Delays increase exposure to filing limits, appeals, and write-offs.

## ASC WORKERS' COMPENSATION WORKFLOW

# The UHS operating model for front-end control, payment integrity, and recovery

### FRONT END

#### Front-end Revenue Control

UHS verifies payer, adjuster, pay-to address, jurisdiction, claim status, and authorization-to-procedure match before the claim is sent.

### PROOF

#### Connectivity Creates Proof

Multi-route delivery through clearinghouses, direct payer connections, secure email, and fax lowers print-mail dependency and strengthens the submission trail.

### RECOVERY

#### Payment Integrity + Old A/R

Paper-to-835 conversion, claim-line balancing, PPO review, underpayment disputes, and older WC A/R recovery help convert hidden value faster.

## Real-world Results From An ASC Client

- Annual WC NPR: more than \$4.0 million
- First paid claim: 5 claim lines totaling \$22,000
- Underpayment identified: \$2,500 per claim line
- Workflow focus: lockbox, paper-to-835 conversion, contract compliance, and automated disputes

0

days to appeal

\$10K

on first appeal

5 PM

submitted same day

## Aged WC A/R review

Fast proof-of-value usually comes from focused review of:

- Aged WC A/R over 90 or 120 days
- Partially paid high-dollar ASC claims
- Written-off balances that still look collectible
- Bill review and repricing disputes
- Corrected claims, document requests, and legal coordination

**UHS operating system:** Registration & intake → eligibility & bill-to → prior authorization → clean claim engineering → 837 + attachments → denials, appeals & underpays → lockbox, 835 & EFT → posting, reconciliation & reporting.

## Schedule A Conversation With UHS Leaders

Use the live UHS event page to book time with the team and prepare for your ASCA + SAMBA discussion.

**On-site Team:** Brendan McAuley | Eric Effertz | Mark Gaines
